PROFIL

I am a final-year Informatics student with hands-on experience in frontend and fullstack web development. I have experience building dynamic web applications using JavaScript, Nuxt.js, Laravel, and RESTful API integration. Through academic projects and industry internship experience, I have developed strong problem-solving skills and the ability to collaborate effectively in Agile environments. I am passionate about building scalable, user-focused web applications and continuously improving my technical expertise as a Software Engineer.

EDUCATION

Del Institute of Technology *(Agst 2022 – Present)*
Informatics – temporary GPA : 3.62 / 4.00
Relevant Subject: Web Programming, Human-Computer Interaction, Interaction Design, System Analysis and Design.

EXPERIENCE

Frontend Engineer Intern *(Jun 2025 – Dec 2025)*
PT. Stafbook Teknologi Asia

- Contributed to the development of the 'Stafbook' web application using Nuxt.js (v2 & v3)
- Integrated frontend components with backend services through RESTful APIs
- Collaborated with Backend Engineers and QA team in an Agile workflow
- Identified, debugged, and resolved application issues based on QA feedback

Student Teaching Assistant for Software Engineering *(Feb 2025 – Mei 2025)*
Student Member

- Assisted in teaching Software Development Life Cycle (SDLC), including planning, analysis, design, implementation, testing, and maintenance
- Guided students in system modeling and documentation using UML (Use Case, ERD, Class, and Activity Diagrams)
- Mentored student teams in applying Agile practices and project planning tools for structured software development

PROJECT

Herbalyze Application | https://github.com/dreamyyily/Herbalyze *(Present)*
Full-Stack Developer

- Built an AI-powered herbal recommendation system using content-based filtering and rule-based approaches
- Developed personalized recommendations based on user health data (personal medical record) and individual conditions
- Implemented recommendation engine using Python, including semantic processing with vector database
- Designed and developed frontend using React for an interactive and user-friendly interface
- Integrated multiple data storage solutions including database, vector database, IPFS, and blockchain for secure and scalable data management
- Conducted end-to-end development including system analysis, design, testing, and technical documentation

SiMBA Application *(2025)*
Head of Analysis

- Create applications for student guidance : counseling, violations, and guardianship
- As the Head of Analysis, I am responsible for ensuring the successful execution of the analysis results from all three teams
- As an analyst in the 'Guardianship' section I am responsible for gathered requirements, analyzed necessary features for the SiMBA website and created system documentation.
- Defined system implementation constraints, API endpoints, and maintenance strategies to ensure optimal performance and scalability.

SiS Application | https://github.com/twinklestar-o/proyek-besar *(2024)*
Scrum Master & System Analyst

- Create a parent information system application that displays information about their children at college
- Served as Scrum Master, helping the team implement Scrum methodology to improve collaboration and team performance throughout the development timeline
- As System Analyst: gathered requirements, analyzed necessary features for the SiS website, and created system documentation
- As System Analyst: created system documentation, including Use Case Diagrams (UCD), Use Scenarios, User Stories, ERD, Class Diagrams, and Activity Diagrams to facilitate UI/UX design and development.

- As System Analyst: defined system implementation constraints, API endpoints, and maintenance strategies to ensure optimal performance and scalability.

PKM Application | https://github.com/delcom-itdel/pabwe-pkm-proyek-2024-k2 *(2024)*
Developer
- Developed a website providing school information for SMA N 1 Balige.
- Implemented CRUD functionalities using the Laravel PHP framework.
- Integrated a database system to efficiently store and manage data.

Auction Application | https://github.com/delcom-itdel/pabwe2024-k7-aucations *(2024)*
Frontend Developer
- Developed an auction application with CRUD functionalities using the Laravel PHP framework.
- Integrated API services to create a dynamic and interactive application.
- Enhanced user experience by adding CSS animations for better visual appeal and interactivity.

ADDITIONAL INFORMATION

- **Skills :**

Web Development	: JavaScript, PHP, Nuxt.js, React, Laravel, HTML, CSS, Bootstrap
Programming	: Python, Java, C
Tools	: GitHub, GitLab, Postman, Figma, Draw.io, Coda
Database & Storage	: MySQL, Vector Database (Chroma), IPFS, Blockchain
Creative Design	: Adobe Photoshop, Blender
Soft Skill	: Communication, Teamwork, Problem Solving
Language	: Bahasa Indonesia (Native), English
